# Zero Carbon Step Code

## MARCH 2025 UPDATE

## **EL-1** effective March 10, 2025

### Effective March 10 new buildings must be at least EL1 of the Zero Carbon Step Code.

This means that applicable buildings following the performance path will be required to measure and disclose operational greenhouse gas emissions.

The Part 3 and Part 9 Step Code Compliance Checklists already disclose operational greenhouse gas emissions to the Authority Having Jurisdiction, so users of those checklists already comply.

**Local governments retain the ability to require or incentivize compliance with higher levels of the Zero Carbon Step Code.**

**Find out more on the Building Codes and Standards website.**
